DTF

PRINTING METHOD

SILKSCREEN

Uses thicker ink and its allow for more solid and vibrant color application, more eye-catching, and more colorful designs that can be seen from even far away.

DTF

Involves printing a design onto a piece of PET film (a special film with a coating that helps transfer designs) using water-based inks and a special powder adhesive. Then, the design on the PET film is heat transferred to fabric using a heat press machine.

SUBLIMATION

is a unique process that uses high heat and pressure to transfer the design from sublimation paper directly onto the chosen product (material or fabric). The combination of pressure and heat embeds the artwork for long-lasting and vibrant results.
